

Bachelor of Electronic Engineering (Medical Electronic)

YEAR 1

YEAR 1
SEMESTER I

**UWS 10103 NATIONHOOD AND CURRENT DEVELOPMENT IN
MALAYSIA**

SYNOPSIS:

This course will provide students a fundamental concept, the processes of formation and development of Malaysia. The topics covered include the concept of state, Malacca Kingdom, implication of imperialism and colonisation, spirit of patriotism and nationalism, independence and formation of Malaysia. Besides, students will also be exposed to the constitution of Malaysia, Malaysian Government System, Economic and Social Development Policy as the main policy in the national development. At the end of the course students will able to appreciate the roles and responsibilities of a good citizen to the country.

UWB 11002 MALAY LANGUAGE

SYNOPSIS:

This course is designed for students to learn the basic of Malay language. Students are exposed to the skills of listening, reading, speaking, and writing with basic vocabulary, grammar and structure. Students are also exposed to the real daily situations which will help them to communicate using Malay language.

REFERENCES:

UWB 10101 ENGLISH FOR ACADEMIC PURPOSES

SYNOPSIS:

English for Academic Purposes focuses on fulfilling students' academic requirements, such as the acquisition of reading, writing, speaking and listening skills in English. The course also provides opportunities for students to acquire note taking and study skills. Students will be reinforced on aspects of English language oral and written skills that are most relevant to them in their academic work. By the end of the course, students should be able to use English for a wide range of academic activities.

UQ*101 CO-CURRICULUM I**

SYNOPSIS:

Kursus ini ditawarkan dalam pelbagai bentuk aktiviti pilihan untuk pelajar peringkat Sarjana Muda dan Diploma. Lapan bidang aktiviti yang ditawarkan adalah Pengucapan Awam, Keusahawanan, Sukan, Khidmat Komuniti, Kesukarelawanan, Kepimpinan, Kebudayaan dan Daya Usaha dan Inovasi.

UWA 10102 ISLAMIC STUDIES

SYNOPSIS:

This course explains about Islamic concept as ad deen. It discusses the study of al-Quran and al-Hadith, Aqidah ahl al-Sunnah wa al Jamaah, trends of aqidah's doctrine, the growth of fiqh's mazhab, the principles of muamalah, Islamic criminal law, the ethics of work in Islam, issues in Islamic Family law, and current issues

UWA 10202 MORAL STUDIES

SYNOPSIS:

This course explores the introduction to moral concepts, some aspects related to the morality and its importance in our daily lives, some western moral theories, moral values in great religions of the world, morality and ethics in professional careers and contemporary moral issues.

REFERENCES:

BWM 10103 ENGINEERING MATHEMATICS I

SYNOPSIS:

Limits and Continuity: Techniques of finding limits. Continuity.
Differentiation and Applications: Techniques of differentiation: product rule, quotient rule. Chain rule. Implicit differentiation. Higher derivatives. Differentiation of implicit functions, parametric equations and inverse functions. Applications: rates of change, maximum and minimum problems, sketching rational functions. **L'Hopital's Rule:** Indeterminate form of type $0/0$, ∞/∞ , $0 \cdot \infty$, 0^0 , ∞^0 , 1^∞ , $\infty - \infty$. **Integration:** Techniques of integration: integration by substitution, integration by parts, integrating rational functions, integrating power of trigonometric functions, rational functions of sine and cosine, integrating hyperbolic functions and integration by trigonometric and hyperbolic substitution. **Further Differentiation and Integration and Applications:** Derivatives and integrals involving inverse trigonometric and hyperbolic functions. Applications: arc length, surface area of revolution, curvature. **Power Series:** Convergence test. Conditional and absolute convergence. Power series: Taylor and Maclaurin series. Differentiation and integration of power series.

BEE 10202 ENGINEERS AND SOCIETY

SYNOPSIS:

This course concerns with the profession of engineers, engineers' role and professional bodies governing the profession. Relationship of engineering and organization, and society at large are covered in this course. Ethics and professionalism cover the code of ethics and moral reasoning. Emphasis is given to the ethical issues in engineering practice; also intellectual property and anti-corruption concept. Next are the responsibilities of engineers and their rights at workplace and team work. Commitment in providing service is taught which involves safety, environmental and global issues. Last are the engineering acts, regulations and standard.

BEL10103

ELECTRIC CIRCUITS

SYNOPSIS

The first course covers the basic theory of circuit analysis. Topics include basic electrical circuit theory and laws, electrical circuit analysis techniques and concepts, energy storage elements, network theorems, review of techniques to solve simultaneous equations, nodal and mesh circuit analysis, dependent sources, Thevenin's and Norton's equivalent circuits, maximum power transfer, solution of first and second order networks to switched DC inputs, natural responses, AC circuit steady-state response analysis, steady state power calculations in circuit analysis. Computer assisted analysis of electrical circuits. This course has an integrated laboratory.

YEAR 1
SEMESTER II

UWS 10303 MALAYSIAN STUDIES AND CULTURE

SYNOPSIS:

This course will provide students in depth the understanding of Malaysia from various perspectives. Topics to be discussed include Malaysia in relation to its history, achievement and international affairs. In addition, students will also be exposed to the ethnic composition of the country, culture and heritage. Teaching and learning process enables student to acquire knowledge and appreciates the reality of life in Malaysia through experiential learning.

REFERENCES:

UWB 10202 EFFECTIVE COMMUNICATION

SYNOPSIS:

This course emphasizes on task- based learning approach and focuses on developing students' delivery of speech in oral interactions and presentations. Importance is given on mastery of self-directed learning, team-work, research, oral presentations, reasoning and creativity. This course also enables students to acquire knowledge and skills necessary for conducting and participating in meetings, including writing of meeting documents. Students will also be exposed to the techniques of conducting interview.

UWS 10202 ETHNIC RELATIONS

SYNOPSIS:

This course focuses on the concept of ethnic relations and its practices in the Malaysian society. Class discussions cover the fundamental of ethnic relations and the history of the construction of a plural society. The Malaysia Constitution will be covered as a core of living in the society. Discussions will be further conducted into detail on the linkages between ethnicity and development in social, political and economic aspects based on top-down and bottom-up approaches by the government and society.

UQ*101 CO-CURRICULUM II**

SYNOPSIS:

Kursus ini ditawarkan dalam pelbagai bentuk aktiviti pilihan untuk pelajar peringkat Sarjana Muda dan Diploma. Lapan bidang aktiviti yang ditawarkan adalah Pengucapan Awam, Keusahawanan, Sukan, Khidmat Komuniti, Kesukarelawanan, Kepimpinan, Kebudayaan dan Daya Usaha dan Inovasi.

BWM 10303 ENGINEERING MATHEMATICS IIE

SYNOPSIS:

First Order Differential Equations: Formation and methods of solution (Separating the variables, homogeneous, linear and exact) , initial value problem, application (electric circuit). **Second Order Linear Differential Equations with Constant Coefficients:** Methods of solution : Method of undetermined coefficient and method of variation of parameter. Application of second order linear differential equation with constant coefficients in electric circuit. **System of First and Second Order Differential Equations:** Eigen value and eigen function. **Laplace Transform:** Definition. Linearity, first shift theorem, Multiplying by t . Unit step function and Delta function, second shift theorem. Inverse Laplace transform : Definition and properties. Convolution theorem. Solve initial and boundary value problems for linear differential equation with constant coefficients which involve unit step function, Dirac Delta function and periodic function. **Fourier Series:** Fourier series in interval period 2π . Odd and even function. Fourier series in interval $(-l, l)$. Half range series. **Series Solution for Differential Equations:** Power series method, Legendre polynomial, Bessel equation. **Introduction of Fourier Transform.**

BEL10203 ANALOG ELECTRONICS

SYNOPSIS:

This course provides the student with the basic knowledge necessary to understand the operation and application of semiconductor devices in discrete electronic circuits. The course covers an introduction to the semiconductor theory. Emphasis is on the basic electronic semiconductor devices such as the diode, the bipolar junction transistor (BJT), the field-effect transistor (FET). Biasing, small-signal and large signal analysis and the principles employed in the design of electronic circuits are included.

Analytical, graphical, and computer tools are used to explain the basic building blocks of analog circuits. Topics also include Frequency Response of BJT and JFET, multistage amplifiers, cascade and cascode configurations, Darlington pair, Differential amplifier, Power amplifiers: class A, B and AB.

BEE 10403

ELECTRICAL TECHNOLOGY

SYNOPSIS:

Electrical principles are an important aspect of an electrical engineering study that involves the basic operations and the characteristic of the various dc and ac electrical circuitry and electrical machines. In general when a study of the electrical technology, the student will be able to tackle problems in examination or in the actual electrical industrial environment with regard to various areas such as the single phase and three phase electrical circuits, electromagnetism, magnetic circuits, the resistor, inductor and capacitor as an electrical devices or component, and the dc and ac electrical machines.

4. Edward Hughes, Hughes Electrical and Electronic Technology, 9th Ed., Prentice Hall, 2005.
5. J. B. Gupta, Electrical Technology, S. K. Kataria, 2004.

BEE10501 ENGINEERING PRACTICES

SYNOPSIS:

The course is developed to give the required knowledge regarding electrical wiring and installation. It will develop the capability of carrying out electrical wiring activities up to a certain level of competency. The topics covered are the domestic wiring and installation, industrial wiring and installation. In the designing of electronic circuits' aspects, OrCAD will be used as it will help in making the schematic entry, doing FPGA synthesis, digital, analog, mixed-signal simulation and printed circuit board layout. PLC will be used to provide the programming knowledge for the controlling of the basic and advance automation system.

YEAR 2

YEAR 2
SEMESTER I

UWB 20302 TECHNICAL WRITING

SYNOPSIS:

This course introduces students to report writing skills needed at tertiary level. Students will learn basic report writing skills such as proposals, progress report, informational and analytical reports. In order to do this, they will learn how to collect data using questionnaires. The data collected will be analyzed, transferred into graphic forms and presented orally and in writing. Based on the analysis of data, students will be able to draw conclusions and make recommendations.

BWM20403 ENGINEERING MATHEMATICS III

SYNOPSIS:

Functions of Several Variables: Domains, ranges, contour line, level curves and 3D-graphs. Partial derivatives and chain rules. Mixed derivatives. Total differentials and exact differentials. Local and absolute extreme values of functions of two variables. **Multiple Integrations:** Double integrals: Areas and volumes. Double integrals in polar coordinates. Surface areas. Triple integrals: Volumes. Triple integrals in cylindrical and spherical coordinates. Center of mass, center of gravity and inertial moments. **Vector-valued Functions:** Definition and graphs. Differentiations and integrations. Tangent vectors, normal vectors, arc length and curvature. Motion in a plane curve. Directional derivatives and gradients of functions of two variables. **Vector Calculus:** Line integrals of scalar and vector field. Independence of path and conservative vector field. Green's Theorem. Surface integrals of scalar and vector field. Gauss's Theorem and Stokes' Theorem

BEL20303 DIGITAL ELECTRONICS

SYNOPSIS:

This course is the first course in digital electronics. Beginning with representing physical values in digital form using binary, octal and hexadecimal numbering system, conversion between these numbering systems, also representation of values in codes such as BCD and Gray. This is followed by representing negative values in binary, binary arithmetic and BCD addition. Basic logic gates and symbols are introduced as well as Boolean expressions, truth tables and timing diagrams. Combining basic gates to implement certain function, and analyzing circuits to obtain its Boolean expression, simplify using Boolean theorem and Karnaugh-map approach. In digital arithmetic, adder circuits are introduced, starting from half adder, full adder and the design of the carry look ahead adder and BCD adder. Then, on to MSI logic circuits such as encoder, decoder, multiplexer and demultiplexer. Memory elements such as latches and flip-flops are introduced followed by flip-flop applications in counters and registers. ADCs and DACs are also included. The final topic is on integrated circuit family characteristic and technology.

BEK 25503 POWER SYSTEMS

SYNOPSIS:

This course is arranged to provide students understanding of electrical power systems. The course is divided into three major parts: fundamental of single-phase and three-phase power distributions, utility power system structures, and industrial power systems. The essential basic knowledge of single-phase and three-phase power systems will be covered at the beginning of the course. Subsequently, electric utility system comprises all the apparatus used in the generation, transmission, and distribution of electric energy will be provided. Finally, introduction to the industrial power system will be made together with a range of technical issues that might arise during the design and utilisation of electrical energy.

5. M. Morris Mano, Charles R. Kime, Logic and Computer Design Fundamentals, 2nd Ed., PrenticeHall, 2001.

BEU 20103 HUMAN PHYSIOLOGY

SYNOPSIS:

This course deals with the cell physiology and its components, nerve cell and tissue at receptor organ, sensory cell's function, vision, hearing, olfaction, brain and autonomic system, gland system, metabolism and reproductive system, digestive system and gastrointestinal, respiratory and delivery system, heart mechanism, chest, blood delivery and gas exchange and air and lastly urea secretion.

BWM30602 ENGINEERING MATHEMATICS IV

SYNOPSIS:

Solution of Nonlinear Equations: Bisection, secant, and Newton Raphson method. **Solution of Linear Systems of Equations:** Gaussian elimination, LU decomposition, Thomas, and Gauss-Seidel method. **Interpolation and Polynomial Approximation:** Newton's divided-difference, Lagrange and Cubic Spline. **Numerical Differentiation:** Taylor series expansion. **Numerical Integration:** Simpson and Gauss quadrature method. **Eigen Values:** Power method. **Ordinary Differentiation Equations:** Solution of Initial-Value Problems with Taylor Series, Euler, Huen, Runge-Kutta methods. Solution of Boundary-Value Problems with finite difference method. **Partial Differentiation Equations:** Explicit and implicit method using finite difference method. **Finite-element Method:** Introduction to Finite Element Method. General approach. Finite-element application in one dimension.

BPK30902

EKONOMI KEJURUTERAAN

SYNOPSIS:

Ekonomi kejuruteraan merupakan satu bidang kajian yang mengaitkan beberapa aspek ekonomi semasa membuat keputusan kejuruteraan. Aspek tersebut melibatkan penilaian kos dan faedah bagi projek teknikal yang dicadangkan. Konsep asas yang digunakan ialah nilai wang-masa, dan teknik yang berkaitan dengan pengkompaunan, pendiskaunan, dan konsep kesetaraan. Beberapa kaedah digunakan untuk menentukan sama ada sesuatu pelaburan itu menguntungkan atau tidak iaitu kaedah PW, FW, AW, IRR dan kaedah faedah-kos.

BEC 20202 MULTIMEDIA TECHNOLOGY AND APPLICATION

SYNOPSIS:

This course is intended to provide a study of multimedia technology and application theory, practice and issues through the use of a multimedia application development and authoring tools. Topic covered; Introduction to Multimedia, Multimedia Application Development and Authoring, Multimedia Elements, Multimedia I/O Technology, Multimedia Storage and Retrieval Technology.

REFERENCES:

BEE20901 ELECTRONIC ENGINEERING LABORATORY II

SYNOPSIS:

This course comprises of practical implementation for the subject of Power System, and Instrumentation and Control System. Various experiments are covered such as generator and transformer, overhead line, short circuits asymmetrical analysis, protection system, power factor correction, error in measurement, basic usage of oscilloscope, sinusoidal waveform, measuring phase and frequency using oscilloscope, application of digital oscilloscope, signal generator and frequency counter three-phase inverter, position control system, speed control system and servo system.

BEM22003 INSTRUMENTATION AND CONTROL SYSTEMS

SYNOPSIS:

This course is about the analysis, design and application of instrumentation and process control system. It is organized in 7 (seven) chapters. The outline is as follows: Chapter 1 presents an introduction to electrical instrumentation. Chapter 2 deals with digital oscilloscope and function generator. Chapter 3 gives introduction to control system. Chapter 4 discuss the mathematical modelling of dynamic system. Chapter 5 presents time domain analysis. Chapter 6 explains the controllers in process control including parameters tuning and controller setting. Chapter 7 discusses control system instrumentations. Finally, Chapter 8 presents measurement system application.

YEAR 3

YEAR 3
SEMESTER I

UWB 10602 FRENCH LANGUAGE

SYNOPSIS:

This course is designed for students to learn the basic French language. Students are exposed to the skills of listening, reading, speaking, and writing with basic vocabulary, grammar and structure. Students are also exposed to the real daily situations which will help them to communicate using French language.

REFERENCES:

1. Girardet, Jacky et Cridlig, Jean-Marie, (1996) *Méthod de français: PANORAMA 1*. Paris: CLE International.

5. Miquel, Claire Leroy et al, (1995). *Vocabulaire Progressive du Français avec 250 exercices*. Paris: CLE International.
6. Peter V. O'Neil (2003) *Advanced Engineering Mathematics*. Thomson Brooks/ Cole.

UWB 10902 MANDARIN LANGUAGE

SYNOPSIS:

This course is designed for students to learn the basic Mandarin language. Students are exposed to the skills of listening, reading, speaking, and writing with basic vocabulary, grammar and structure. Students are also exposed to the real daily situations which will help them to communicate using Mandarin language.

UWB 11002 MALAY LANGUAGE

SYNOPSIS:

This course is designed for students to learn the basic of Malay language. Students are exposed to the skills of listening, reading, speaking, and writing with basic vocabulary, grammar and structure. Students are also exposed to the real daily situations which will help them to communicate using Malay language.

REFERENCES:

UWB 10802 JAPANESE LANGUAGE

SYNOPSIS:

This course is designed for students to learn the basic Japanese language. Students are exposed to the skills of listening, reading, speaking, and writing with basic vocabulary, grammar and structure. Students are also exposed to the real daily situations which will help them to communicate using Japanese language.

REFERENCES:

BEE 31202 CREATIVITY AND INNOVATION

SYNOPSIS:

This course focuses on developing a creative person who will eventually think strategically, creatively and critically. The knowledge and skills acquired throughout the course will later be applied by the students in solving problems and making decisions in the future. In this course, students will be exposed to various creativity and problem solving techniques. Some of the skills to be covered throughout the course are problem solving, techniques in creativity and techniques in innovation. Students will also be participating in exhibition and competition.

BWM20502 ENGINEERING STATISTICS

SYNOPSIS:

Random Variables. Probability Distributions: Binomial, Hypergeometric, Poisson and Normal distributions. Normal approximation to Binomial and Poisson. **Sampling Distribution:** Sampling distribution for mean and difference between two means, distribution for proportion. **Estimation:** Point estimation and confidence intervals, confidence intervals for mean, variance and proportion. **Hypothesis Testing:** Mean for small/large sample, difference between two means and proportion for small/large sample. Variance and the ratio of variance. **Simple Linear Regression:** Graphical method, least square method. Coefficient of determination R^2 . Correlation.

BEP 31803 ELECTRONIC COMMUNICATION SYSTEMS

SYNOPSIS:

This course introduces the fundamentals in analog and digital communication systems. Comprises of analysis of signals and noise, generation of analog and digital modulation schemes, transmission lines, antenna and wave propagation as a part of a complete system in communication. Finally, the topic discussed relate with current application in communication systems.

BEL30403 ELECTRONICS CIRCUIT ANALYSIS AND DESIGN

SYNOPSIS:

Fundamental concepts of analog electronics and the application of these concepts to the design of analog circuits. Among the topics covered are the fundamentals of operational amplifiers: linear and non-linear operation; feedback and oscillators; op-amp circuits: Instrumentation amplifier, active filters; regulated DC power supply. Focus is on the design, implementation, and testing of analog circuits by means of computer simulation software.

BEE31002

ELECTRONIC ENGINEERING LABORATORY III

SYNOPSIS:

This laboratory give students hands-on experience in understanding the material presented in the following subjects:

- BEP30403 Communication Theory
- BEL30403 Electronic Circuit Analysis & Designs.

BEU 30202 PRINCIPLE OF PHYSIOLOGICAL DEVICES

SYNOPSIS:

This course discuss on concept of medical devices and limitations of medical measurement, active and passive transducer, source of bioelectric potential, evoked response, biopotential electrode, biochemical transducer, electronic component and computer application in biomedical instrumentation.

REFERENCES:

1. R.S. Khandpur, Biomedical Instrumentation: Technology and Application, McGraw-Hill, New York 2005.

YEAR 3
SEMESTER II

BEE30103 ENGINEERING MANAGEMENT

SYNOPSIS:

This course introduces engineers to the ways in which management principles are applied in engineering project and organization. Managing people and career opportunities as engineering manager. Management function: planning and forecasting, strategy formulation, decision making, organizing, leading and controlling. Quality Management. Project management and its activities. Resources Management, Financial Management, and Maintenance, Reliability and Safety Management are among the topics covered.

BEP 30503 DIGITAL SIGNAL PROCESSING

SYNOPSIS:

This course is to introduce and understand the main concepts of digital signal processing, review of discrete signal and system, characteristic and operation, discrete convolution, digital filter design, sampling and quantization, discrete Fourier transform, z-transform, IIR and FIR digital filters, the implementation of digital filters, random process, spectrum estimation and DSP processor.

BEC 30303

COMPUTER ARCHITECTURE AND ORGANISATION

SYNOPSIS:

The course is about the fundamentals of computer organization and architecture and relates these to contemporary design issues. The application of these concepts depends on the current state of the technology and the price/performance objectives of the designer. This syllabus is organized into eight chapters. The structure and functional of computer are covered in chapter 1 and chapter 2. The performance issues are also discussed in chapter 2. Chapter 3 through chapter 6 covered the major components of the computer systems. Architectural issue such as instruction sets design and data types are covered in chapter 7. Finally, organizational issues such as pipelining also covered in chapter 8.

5. Martin Bates, "Introduction to Microelectronic Systems: The PIC16F84 Micocontroller", London: Arnold, 2000.

BEE31102 ELECTRONIC ENGINEERING LABORATORY IV

SYNOPSIS:

To give students hands-on experience in understanding the material presented in the following subjects:

- BEC 30303 Computer Architecture and Organization
- BEC 30403 Microprocessor and Microcontroller

BEU 30302 PHYSIOLOGICAL SIGNAL AND SYSTEM

SYNOPSIS:

This course discuss on complex frequency and Laplace transform, Fourier series, biomedical signal processing, signal acquisition and processing using Fourier transform, discrete Fourier transform, Fast Fourier transform and power spectrum, techniques for physiological processing and example of physiological signal processing using spectra analysis and mean power frequency.

REFERENCES:

1. R.S. Khandpur, Biomedical Instrumentation: Technology and Application, McGraw-Hill, New York 2005.

5. Kayvan Najarian and Robert Splinter, Biomedical Signal and Image Processing, , Boca Raton, FL: CRC Press, 2006.

YEAR 3
SEMESTER III

BEE 30304 INDUSTRIAL TRAINING

SYNOPSIS:

Students are required to undergo industrial training in related field for 8 weeks in the organizations determined by faculty and assessed by both their external and internal supervisors.

REFERENCES:

1. Buku Log Latihan Industri UTHM. (Bahagian A), Pejabat Penerbit UTHM.

YEAR 4

YEAR 4
SEMESTER I

BEE 40602 FINAL YEAR PROJECT I

SYNOPSIS:

This course is the first part of an individual project during final year of study based on a topic selected from the subjects studied or a related engineering problem. Each student is expected to present his proposal and research plus a progress report during the first seminar of the final year project.

REFERENCES:

1. Guidelines for the Implementation of Final Year Project in the Faculty of Electrical and Electronics Engineering UTHM.
2. Guidelines for Thesis Writing.

BEU 40403 MEDICAL IMAGING

SYNOPSIS:

This course introduces on medical imaging methods and application in diagnosis and recovery, X-Ray criteria, exposure estimation, law and attenuation coefficient, image resolution, ultrasound imaging, radiography and tomography image classification, filtration, compensation and MRI.

REFERENCES:

1. Richard R. Carlton and M. Adler, Principles of Radiographic Imaging : An Art and a Science (3rd Edition), Delmar Thomson Learning, USA, 2001.

YEAR 4
SEMESTER II

BEE 40604 FINAL YEAR PROJECT II

SYNOPSIS:

This course is the second part of an individual project during final year of study based on a topic selected from the subjects studied or a related engineering problem. Each student is expected to present result of his final year project.

BEU 40902 MEDICAL EQUIPMENT MANAGEMENT & SAFETY

SYNOPSIS:

In this course, student will be lectured on safety and management issues specifically on medical equipments which are essential for a medical electronics graduate since, the device which they will be working with are mostly interfaced with human body. Therefore, the following items will be covered during this subject such as biomedical engineering services, clinical engineering, medical informatics, ethical issues associated with the use of medical technology, compatibility and standards, quality assurance and safety procedure in working conditions.

BEU41003 MEDICAL MEASUREMENT SYSTEM

SYNOPSIS:

This course deals with the ECG measurement, EMG measurement, EOG measurement, EEG measurement, oscillometric blood pressure measurement, photoplethymogram measurement, respiratory ventilation detection, pulse meter measurement.

BEU41103 BIOMATERIAL

SYNOPSIS:

This course introduce students on biomaterials science and biocompatibility, introduction to structure and properties of biological tissues, polymers, metals and ceramics, introduction to methods for cellular and tissues analysis, investigate the microscopic and macroscopic structure of tissues, determine the physical structure and modeling, assembly of biological macromolecules and pathobiological response to implants.

LIST OF ELECTIVE COURSES

**BEU 40703 VIRTUAL INSTRUMENTATION DESIGN FOR
MEDICAL SYSTEMS**

SYNOPSIS:

The power of virtual instrumentation allows students to interact with a variety of existing systems and model diverse scenarios to enhance decision-making. Students are exposed on design of medical systems using graphics programming language of LabVIEW. This subject provides students in designing and programming for numerous medical specialties such as research application, clinical application, medical device development and test application, health care information management systems, mathematical modeling/simulation of physiologic systems and internet application.

BEU 40803 TELEMEDICINE

SYNOPSIS:

This course is about medical information, bio signal processing, filtering, smoothing signal, digitalization, and analysis on application of computer in bio-medical, internet and medical information communication, medical information management, database, standard procedure in exchange information, telemedicine law. Besides, this course will introduce on case study using appropriate software for mange telemedicine system, Tele-conference issues, tele-radiology and DICOM.

BEU41203 BIOMEMS AND MEDICAL MICRODEVICES

SYNOPSIS:

This course introduces the BioMEMS, lithography, etching method, thin film deposition, ion implantations, surface micromachining, polymer materials, electrokinetic phenomena, microvalves, micromixers, micropumps, basic sensors, optical sensors, piezoelectricity and SAW devices, electrochemical detection, activation methods, microactuators for microfluids, equivalent circuit representations and drug delivery system.

6. Mohamed Gad-El-Hak, MEMS : Introduction and Fundamentals, Boca Raton, FL: Taylor and Francis, 2006.

BEU41303 BIOMEDICAL OPTICS

SYNOPSIS:

This course covers the principle of the optical devices, reflexion and refraction theories, lenses and aberrations, camera and photographic film, telescope, microscope, projection systems, photoconductive detectors, semiconductor photodiodes, PIN and avalanche photodiode, photomultiplier, charge coupled devices, noise and sensitivity of electro-optic detectors, quantum behavior of light, spontaneous and stimulated emission, population inversion, optical resonant cavity, spectral bandwidth and coherence, type of lasers, fiber optics technology and applications and optics in medical application.

**BEU41403 SYSTEM DESIGN IN REHABILITATION
ENGINEERING**

SYNOPSIS:

This course covers the rehabilitation technologies, factor development in rehabilitation engineering, assistive devices, and prostheses term terminology, sensorial prostheses of hearing, auditory system, hearing aids technologies, pacemakers technologies and system design using fuzzy logic, simulation of fuzzy pacemaker, robotic system in rehabilitation, software architectures in the IRL, Intelligent agent for human-robot interaction, computerized obstacle avoidance system, mobile robotics technologies and the guide cane.

BEU41503

BIOMEDICAL ENGINEERING AND APPLICATIONS

SYNOPSIS:

This course deals with biological mechanic concept, viscoelastic muscle, cartilage and tendon, analysis basic medical mechanic, materials for developing physiological support device, materials degradation and material properties, biotechnological application in medical fields, genomics, bioinformatics, and biomagnetism.
