Welcoming Address from the Vice Chancellor

Assalammualaikum Warahmatullahi Wabarakatuh and Warm Greetings

I would like to take this opportunity to welcome the new students of Academic Session 2012/2013 to Universiti Tun Hussein Onn Malaysia (UTHM). Thank you for your interest in pursuing further studies for a success and better life. You should be thankful for being fortunate in comparison to other friends whom do not have the chance to continue their studies in an institution of higher learning. Therefore, utilize this good opportunity to instill the spirit and will power in pursuing knowledge for the success and prosperity of oneself, family, religion, race and the Nation.

UTHM is determined to be one of the well-known higher learning institutions in the Nation and and worldwide. Having well-planned academic system whilst supported with the latest and modern teaching and learning facilities, UTHM is capable of producing excellent graduates to meet the needs of national workforce.

As one of the Public Higher Learning Institutions in the country, UTHM offers a variety of academic programmes at Diploma, Bachelor, Master and Doctorate levels. UTHM is the best choice for science, technology and engineering courses. UTHM also offers courses in the fields of technology management, information technology, and technical and vocational education. The academic programmes of UTHM focus on student-centered hands-on aspect to ensure that the knowledge and skills acquired can be readily applied especially in national industries. High quality co-curricular programmes will provide you the opportunity to strengthen on your honorable personality and competence.

I put my trust that you will become a member of the University that will continue the excellent tradition of the University in becoming graduates whom are capable in applying and translating the science, engineering and technology knowledge in accordance with the national needs.

Wishing You Success

Professor Dato' Dr. Mohd Noh bin Dalimin
Vice Chancellor
Universiti Tun Hussein Onn Malaysia

Welcoming Address from the Deputy of Vice Chancellor (Academic and International)

Assalammualaikum Warahmatullahi Wabarakatuh and Warm Greetings

I would like to take this opportunity to express my warmest congratulations and well done to you as the new students whom have successfully been selected to pursue studies at Universiti Tun Hussein Onn Malaysia for this 2012/2013 session.

I would also like to congratulate the Centre for Academic Development for successfully publishing the proforma which will serve as the students guide in planning the learning beginning the first semester till the completion of studies at this University.

Detailed planning and effective implementation in each semester coupled with preparedness before attending the lectures are very important to ensure you are prepared for the learning process. In addition, preparedness for the co-curricular programmes also is important to ensure that the knowledge gained is beneficial and helps in upholding your profession in the future.

I hope the publication of this proforma can be fully utilised in planning for your learning in this University and you are able to make the best decision in achieving success with flying colours.

Last but not least, I would like to wish All the Best and pray that you will be successful in your studies at this University and thus be able to contribute towards talented human capital for the development of the religion, society and Nation.

Thank you.

Profesor Ir. Dr. Abdul Aziz bin Dato' Abdul Samad
Deputy of Vice Chancellor (Academic and International)
Universiti Tun Hussein Onn Malaysia

Welcoming Address from the Dean of Faculty of Computer Science and Information Technology

Assalammualaikum Warahmatullahi Wabarakatuh and Warm Greetings

First and foremost, I would like to welcome the new students to Faculty of Computer Science and Information Technology (FSKTM) for academic session of 2012/2013. As new student at FSKTM, I would like to offer my heartiest congratulations to each one of you for being selected as student at UTHM and at FSKTM, specifically.

In realising UTHM mission and vision to produce graduates whom are creative and of high quality, FSKTM is offering various courses. These courses are offered in consideration of the market research conducted for the field of Computer Science and Information Technology. You will be exposed to learning and teaching covering the theory and practical in the field of Computer Science and Information Technology including educational visit to IT industries and industrial attachment.

At the moment, FSKTM has four (4) departments, i.e. Department of Software Engineering, Department of Multimedia, Department of Information Security, and Department of Web Technology. Through these four (4) departments, five (5) Bachelor programmes, four (4) Master by mix-mode programmes, one (1) Master by research programme and one (1) Doctorate of Philosophy (PhD) programme are offered.

With the Bachelor programmes offered by FSKTM, you should take the opportunity to work hard so that the goals of parents, industry and nation can be achieved. Systematic learning planning coupled with good preparation throughout your studies will produced excellent graduates. You should be ambitious in academic as well as self development.

Last but not least, congratulations and all the best!

Thank you.

Prof. Dr. Rosziati binti Ibrahim
Dean
Faculty of Computer Science and Information Technology
Universiti Tun Hussein Onn Malaysia

Vision

Towards a world class university in engineering, science and technology for sustainable development

Mission

UTHM is committed to generate and disseminate knowledge, to meet the needs of industry and community and nurturing creative and innovative human capital, based on tauhidic paradigm

Direction

Developing a future sustainable technological university

Education Philosophy of University

The education and training in this university is a continuous effort to lead in the market oriented academic programmes. These programmes are student-focused and are conducted through experiential learning in order to produce well trained human resource and professionals who are catalysts for a sustainable development

Logo of the University

Logo of Universiti Tun Hussein Onn Malaysia (UTHM) is the pride, identity and idealism of the members of UTHM community. UTHM logo displays a Proton, Book, Tiered Mortar Board, Book Rest and Shield.

The whole concept of the logo symbolises UTHM as an Institution of Higher Learning which supports the growth and development of knowledge at all levels in fields of Science and Technology.

Blue represents a close-knit circle of members of UTHM community which ensures the success and enhancement of its educational and research programmes and activities for the benefits of mankind.

Red symbolises the courage of UTHM in the exploration of new fields as the pioneer in science and technology applications, which reflects the spirit and self-esteem of the members of UTHM community.

Symbolism

Red	Courage
Blue	Co-operation/Loyalty
Silver	Quality/Prestige
Book Rest	Repository of knowledge
Proton	Science and technology
Book	Knowledge
Mortar board	Levels of study
Circle	Resilience and its relation to global characteristics
Shield	Confidence

Faculty of Computer Science and Information Technology

The establishment history of Faculty of Computer Science and Information Technology (FSKTM), Universiti Tun Hussein Onn Malaysia started in September 2000 with the establishment of the Department of Information Technology and Multimedia (JTMM), Faculty of Engineering Technology, Kolej Universiti Tun Hussein Onn (KUiTTHO). In May 2004, JTMM moves ahead with the establishment of Faculty of Information Technology and Multimedia (FTMM) which was operating at the Parit Raja City Campus, Batu Pahat, Johor.

On 24 August 2010, FTMM achieved another milestone when the UTHM Board of Directors agreed to rebrand the faculty to Faculty of Computer Science and Information Technology. Through the rebranding, four (4) new departments are established, i.e. (a) Department of Software Engineering, (b) Department of Multimedia, (c) Department of Information Security, and (d) Department of Web Technology.

The faculty offers academic programmes to students at Bachelor and Post Graduate levels. FSKTM is established with the goal to conduct programmes which have been planned to assist in the implementations towards realising the vision and mission as well as to conduct research and innovative development in accordance to the nation needs.

Apart from conducting competitive academic programme, members of FSKTM hope to create better success in the future by playing important roles in producing skilled professionals in the various field of Computer Science and Information Technology while meeting the needs of industries, locally and internationally. FSKTM organisation chart is shown in Figure 1.

UWB10102 Academic English

Synopsis

This course focuses on fulfilling students' academic requirements such as the acquisition of reading, writing, listening and speaking skills in English. The course also concurrently provides opportunities for students to acquire basic grammar knowledge to complement the acquisition of English language. Students will be reinforced on aspects of English language oral and written skills that are most relevant to them in their academic work. By the end of the course, students should be able to use English for a wide range of academic activities.

UQ*1xxx1 Co-Curriculum I

Synopsis

This course is offered in the form of multiple choice of activities for Diploma students and undergraduates. Eight categories of activities are offered which are Public Speaking, Entrepreneurship, Sports, Community Service, Volunteering, Leadership, Cultural, Effort and Innovation.

BIC10103 Discrete Structure

Synopsis

The course discusses on the concept of discrete mathematics and how it is utilized in ICT practically. The course covers topics on fundamental principles of logic and proofs, sets, mathematical induction, relations and functions, recurrence relation, algorithm, and graph theory.

BIC10204 Algorithms and Programming

Synopsis

This course introduces students to the algorithm principles in solving problems and computer programming. Topics discussed include introduction to computer programming, problem

solving and algorithm, fundamental structure of programming, input and output data, control statement, functions, sequence, structure and pointer.

BIC10303 Algebra

Synopsis

Real Nombor: System of real number, notation and inequality, exponent, surd and logarithm. Equation and Inequality: Linear equation, formulae and application, quadratic equation and application, other equations, inequality, absolute inequality. Polynomial: Basic concept, algebra operasion for polynomial, remainder theorem and factor theorem, synthetic divider, quadratik equation, inequality and partial fraction. Function and Graph: Relationship and function, domain and range, special graph function: onstant function, linear function, quadratic function, cubic function, square function, ratio function, absolute value function and piecewise function, operation for functions, inverse function. Matrices: Definition and notation, algebra operation for matrices, elementary row operation, determinant, inverse of matrices. System of Linear Equations: Introduction, system of linear equations of two variables, system of linear equations of multiple variables. Matrices method: Inverse of matrices, Gauss-Jordan elimination, Cramer's rule.

UWB10202 Effective Communication

Synopsis

This course emphasizes on task-based approach and focuses on developing students' delivery of speech in oral interactions and presentations. Importance is given on mastery of self-directed learning, teamwork, research, oral presentations, reasoning and creativity. This course also enables students to acquire knowledge and skills necessary for conducting and participating in meetings, including writing of meeting documents. Students will also be exposed to the techniques of conducting interviews.

BIC10603 Statistics

Synopsis

Descriptive Statistics: statistics definition, sampling technique, frequency distribution, graph, measure of Central Tendency and variance. Random variable: Discrete and continuous random variables, expected value and variance. Probability distribution: binomial, Poisson and normal distribution. Sampling distribution: sampling distribution for mean, difference two means, variance and ratio of 2 variances, t-distribution, chi-square distribution and F- distribution Estimation: point and interval estimation. Confidence interval for mean, difference two means, variance and ratio of 2 variances. Hypothesis testing: test of mean, difference two means, variance, ratio of 2 variances and difference between 2 samples. Matrices: Cramer Rule, Inverse Matrices. Calculus: Differentiation, Integration, Stock Control, Economic Ordered Quantity.

BIS10103 Fundamentals of Information Security

Synopsis

The course provides students with the knowledge and skills on the fundamentals of information security. Topics of discussion include introduction to information security, security management, validation and access control, introduction to cryptography, viruses and kriptografi, viruses and malicious code, media security, electronic commerce and database security, and information security issues and ethics.

BIC10703 Computing Skills

Synopsis

The course introduces student to three fields of fundamental skills in computing and information technology. Students will work on hands-on assignments of computer system maintenance, multimedia product, and web development. Students will be exposed to business concept and internet marketing using the latest web technology.

BIS10203 e-Commerce Security

Synopsis

The course provides students with the theories and skills of the concepts and security technology in e-commerce. Topics discussed include introduction to e-commerce, e-commerce security and security implementations, payment mechanisms security, and e-commerce related issues.

UWB20302 Technical Writing

Synopsis

This course introduces students to report writing skills needed at tertiary level. Students will learn basic report writing skills such as proposals, progress report, informational and analytical report. In order do this, they will learn how to collect data using questionnaires. The data collected will be analyzed, transferred into graphic forms and presented orally and in writing. Based on the analysis of data, students will be able to draw conclusions and make recommendations.

UWS10103 Nationhood and Current Development of Malaysia*

Synopsis

This course discusses on the fundamental concept, process of formation, and development of Malaysia. It includes Malay Sultanate of Malacca Empire, imperialism and colonialism, patriotisme and nationalism, the independence and formation of Malaysia, Constitution of Malaysia, government system of Malaysia, main policies in national development, roles and responsibilities of a citizen, and the success and challenges of Malaysia.

BIC20803 Operating Systems

Synopsis

This course introduces students to the knowledge and skills of operating systems management. Topics that will be discussed include introduction to operating systems, computer system structure, processes, CPU scheduling, deadlock, memory management, virtual memory and file systems.

References

BIC21003 Systems Analysis and Design

Synopsis

The course introduces students to Software Life Cycle Model such as analysis, logical design, physical design, implementation and maintenance, as well as techniques and methods of system development such as the decomposition diagrams, entity-relationship diagrams (ERD), data flow diagrams (DFD) and modelling procedures. Students will also be taught on how to identify system analyses through literature, economy, technical, skills, group work, and automation role in system analysing and design.

BIC21102 Professional Ethics and Occupational Safety

Synopsis

The course includes discussions on professional ethics in computing. Topics of discussion include introduction to computing professional ethics, professional ethics and responsibilities, personalities in computing ethics, security and control, copyright and intellectual property, freedom in speech, courtesy, pornography and filtering, and cyber laws in Malaysia.

References

BIC31502 Creativity and Innovation

Synopsis

This course focuses on developing a creative person who will eventually think strategically, creatively and critically. The knowledge and skills acquired throughout the course will later be applied by the students in solving problems and making decisions in the future. In this course, students will be exposed to various creativity and problem solving techniques. Some of the skills to be covered throughout the course are problem solving, techniques in creativity and techniques in innovation.

BIS30803 Computer Crimes and Digital Forensics

Synopsis

The course provides students with the knowledge and skills on computer crimes and digital forensics. Topics of discussion include introduction to computer crimes, computer forensics and digital investigations, computer forensic devices, operating system investigations, cyber crimes, cheating and forensic investigations, policies and procedures, and issues in computer crimes and digital forensics.

BIC31704 Bachelor Degree Project II

Synopsis

In the course, students will implement methodology and will be able to implement project successfully. Students will have to develop and present final product with complete documentation for each phase of the project development.

Year 4 Semester I

Classification	Code	Course	Credit
Programme Core Courses	BIC41812	Industrial Training	12
		Total Credit	

BIC41812 Industrial Training

Synopsis

The course requires students to attend industrial training for a period of 24 weeks at any government or private agency. Students will be tasked on assignments or projects, which have been discussed and approved by both faculty and the agency, and the results of the assignments or projects will have to be presented at the end of the course.

BIS33003 Advanced Cryptography

Synopsis

The course focuses on the knowledge and skills in cryptography. Topics discussed include introduction to public key cryptography, number theory, RSA algorithm, key management system, key exchange algorithm, algorithm implementation, public key algorithm cryptanalysis, and legal agencies.

BIS33103 Corporate Security Engineering

Synopsis

The course provides students with the knowledge and skills in corporate security engineering. Topics discussed include introduction to corporate security engineering, security components, security methods and mechanisms, copyright and privacy protection, security management, system evaluation and assurance, and various security levels.

BIS33203 Information Security Standards

Synopsis

The course provides students with the knowledge and skills in the information security standards. Topics of discussion include enterprise security architecture, environment and operation security, disaster recovery plan, information security standards, information security framework standards, information security mechanism standards, information security protocol standards, and information security evaluation criteria.

BIS33303 Critical Infrastructures Security

Synopsis

The course provides students with the knowledge and skills in critical infrastructure security. Topics discussed include introduction to critical infrastructure security, critical infrastructure risks and threats, threats estimation and assessment, critical infrastructure security protection, and critical infrastructure security strategic plan.

BIS33403 Special Topics in Information Security

Synopsis

The course introduces students to current issues in information security. Topics of discussion include principles, computer crimes, e-commerce, networking, and applications of information security in current and working environments.

BIS33503 System Security

Synopsis

The course provides knowledge and skills to students in security management and system applications. Topics discussed include introduction to security management and system applications, database security requirements, reliability and integrity, data sensitivity, inference problems, user accounts administrator, database security model, and data security policy.

BIS33603 Forensics Data Analysis

Synopsis

The course provides students with the knowledge and skills on forensics data analysis. Topics of discussion include digital forensics, data hiding techniques, analysis techniques, networking forensics, and current issues.
